

SNOK™ Enterprise Solution

Industrial assets are not operated in isolation, that is why the SNOK™ line of products is easily scalable and flexible. You have the option of starting small using SNOK™ to monitor one site. Or you can install SNOK™ across hundreds of sites and several control centers to optimize your cybersecurity program.

On asset level, SNOK™ supports legacy technology as well as the newest standards. In the control center, a **SNOK™ Detection Server** monitors all connected assets, performs cross-site analysis and gives your team real time risk assessment and incident response capabilities as well as a reporting and forensics tool.

The Secure-NOK team, consisting of highly competent personnel with years of ICS experience, also offers analysis services that can help you resolve any cybersecurity incidents.

ABOUT SECURE-NOK™

Secure-NOK™ is a cybersecurity specialist company for Industrial Automation and Control Systems. We provide solutions that detect cyber-attacks such as espionage, sabotage, malware and other harmful cybersecurity events in industrial installations.

The company was established in 2010 and is headquartered in Hamar, Norway with offices in Oslo and Stavanger. Secure-NOK™ is comprised of an international team with extensive experience in controls and automation systems cybersecurity.
